Success for the IP&EE Conference at the NEC

The head of the Claverton Think-Tank and the organiser of the IP&EE Conference, Dave Andrews, was upbeat about the strengths of the IP&EE Conference. He reports that a total of 28 speakers, leading energy professionals in their own right, delivered an average of 12 papers per day.

"We were overwhelmed by the response and we had many packed Conference sessions. Delegates came from as far away as Africa to hear papers on a wide variety of power topics. Many contacts were made."

He said: "Ade Adekoya of Jemray Nigeria Ltd clinched a deal with Andrew Chinnery of UK-based Yellow Power Ltd for the supply of diesel & gas power generation systems at the Conference. So you can see this Conference was not simply an opportunity to learn about new techniques & technology, but formed a proper forum where business could be accomplished."

The 2010 Conference reflects the Claverton Energy Group's growing status within Europe's energy circle, serving as a link between practical end-users and cutting-edge new technology.

According to Dave Andrews, the speakers were 'uniformly excellent'. The most popular papers were those concerned with diesel generators and the National Grid, in particular one seminal paper from Mark Duffield. William Orchard's presentation about gas engines & CHP also proved popular.

Explosion prevention was a core topic in a technical paper presented by Tetyana Yynnyk of Sergi France. Her paper on Transformer Explosions demonstrated how such incidents can cripple power supply operations. Her paper outlined some of the latest cutting-edge strategies and technology available to minimise the risk to industry.

Ilaria Peretti of Turboden also delivered a well-attended study focussing on the latest research involving the Organic Rankine Cycle and the use of small decentralised biomass plants.

For any enquiries about the past Conference or speaker details please call Dave Andrews directly on Mobile number: +44 (0) 755 265 9166 or via his direct line on Tel: +44 (0) 1225 837978. To download the Conference Papers please click onto the Claverton website: www.claverton-energy.com

Gas Turbine Plants

Mid America Engine, Inc.
POWER GENERATION SPECIALISTS

205-590-3505
sales@maegen.com

- Over 100 MW of gas turbines • IN STOCK •
- New & Used Solar Turbine units available
- Complete turn key plants offered on a "Fast-Track" basis
- 50 Hz or 60 Hz • Low NOx
- Liquid fuel and Dual Fuel available
